Windows application based on the .NET Framework 3.0 is available on the Microsoft website and has won the Red Dot Design Award. It is part of the "Extended Workbench" package with "AutoCAD 2010", "AutoCAD LT", "AutoCAD Architecture 2010", and "AutoCAD Mechanical 2010". Field of the Invention The present invention relates to an image data processing apparatus which can display images of varying sizes in accordance with the size of an input image data, and a storage medium which stores a program. 2. Description of the Related Art When image data input from a digital camera or the like is to be displayed on a personal computer or the like, the amount of data that needs to be displayed may exceed the capacity of a memory for storing data. For example, when image data input from a digital camera having 12 million pixels is to be displayed on a personal computer, an extremely long period of time is required to store data in a memory of the personal computer. In order to reduce the memory capacity required for storing image data, some methods have been proposed. For example, Japanese Patent Laid-Open No. 2002-87320 discloses a method of compressing the amount of data by encoding a group of pixels into a single symbol. For example, consider the case where image data including 100 lines each with 100 pixels is to be displayed. The image data is divided into a group of pixels including 100 lines each with 100 pixels. Then, each of the 100 lines is encoded into a single symbol using the Huffman encoding. By doing this, the amount of data that needs to be stored in a memory can be reduced to 25% of the original data size. In this way, the data volume is compressed. Further, Japanese Patent Laid-Open No. 2002-87320 discloses a method of, when the amount of data that needs to be stored in a memory exceeds the capacity of the memory, dividing the group of pixels into sub-groups each including a predetermined number of lines, and further reducing the amount of data by encoding the group of sub-groups into a single symbol using the Huffman encoding. According to the method disclosed in Japanese Patent Laid-Open No. 2002-87320, the amount of data that needs to a1d647c40b

The Design Review feature of the Markup program allows you to share your designs directly from the CAD workspace, and instantly review the designs of your collaborators, enabling you to see if their changes are appropriate before you commit to using them. Markup Performance: Get feedback from and incorporate feedback into your drawings without delay, right in the CAD workspace. Turnless drawing views: Use the newTurnless drawing views to give the drawing area room to breathe. Watch the new orange flag on the bottom right of the drawing area to see when you're in a turnless view. CAD Mode: A new interface option in the Drawing > Tool Options dialog gives you access to easier drawing and editing of simple geometric shapes. The tool options option will also launch the Drawing and Interiors > AutoCAD Mode interface, allowing for easy creation of geometric shapes that will be perfect for drawing the floor plan of a small residence or building. The AutoCAD Mode interface lets you draw a polyline using either one click or four clicks. And with support for Advanced Shapes, the new tool options option will launch the AutoCAD Application Programming Interface (API). 2D and 3D printing: Create geometric shapes for use in AutoCAD for 3D printing. The new Measure command is a powerful tool for measuring 3D objects. Measure shows a "3D Scale" measurement along with the measurement's 3D object, making it easy to measure and edit 3D objects. With support for multiple measurement methods (uniform, nonuniform and single), the new Measure command shows multiple measurement methods (1:4:9, 5:6:9 and 9:12:18) along with the measurement's 3D object, so it's easy to measure and edit 3D objects. And to get the most accurate measurement, the new Measure command can also measure using the measurement's actual dimensions rather than the dimensions of the drawing. Review tools: Review tool features give you the most efficient way to inspect your drawings. It's faster and more accurate than your typical review tool. The new Review Tool feature introduces new tab-like interface elements and the Review Commands button to quickly open the Review Tools dialog. These new elements make it easier to see and use your review tool. You'll also be able
