Application Development Framework (ADF) was developed to enable AutoCAD integration with software created by third parties. ADF was originally created in the 90's for developers to make AutoCAD interfaces easier to build. Later ADF evolved to allow independent companies to create plug-ins for AutoCAD using .NET and AutoLISP. ADF supports: Application Programming Interfaces (API) include : AutoLISP, Visual LISP, .NET The AutoCAD 2000-2016 Windows Interface, or Windows API (WinApi) for short, is a programming interface and development framework developed by Autodesk. The Windows API has been in development since 1994. History AutoCAD is a professional desktop application used for 2D drawing, designing, digitizing and labeling. First released for DOS on November 15, 1982, AutoCAD is a desktop application that is both graphical and text-based. AutoCAD's visual interface requires relatively little user interaction when compared to other CAD programs. This method of interaction is favored by non-programmers or CAD beginners. Features Features and functionalities are specified and detailed in AutoCAD system requirements. These usually include in the book called the AutoCAD Guide. These are: Requirements It is recommended that a license for AutoCAD be purchased from Autodesk for use on a single workstation with a Microsoft Windows OS. No authorization is required to use the product if used on a stand-alone workstation or on a LAN. A user must be authorized to perform design and drafting using the software. Autodesk's software is distributed using the Software as a Service (SaaS) model. This model provides AutoCAD and other software such as BIM 360, on a subscription model and makes the licensed software available to a network of users using a centralized database. A limited number of user licenses can be purchased as a standalone license. This option is usually available only for high volume users. A standalone license includes standard issues of the operating system as well as the software. AutoCAD allows users to create drawing files, edit the drawing files, and provide drawings to a client. AutoCAD also allows users to design, prepare, and publish for the BIM 360 standard. Newer versions of AutoCAD have also included web applications to facilitate live collaboration for the design of structural, civil, mechanical and electrical plans. Structural a1d647c40b

Diurnal variation in the intraocular pressure in patients with uveitis. The present study was undertaken to investigate the frequency of diurnal variations in the intraocular pressure (IOP) in patients with uveitis, and to determine factors, other than the extent of inflammation, that could influence the occurrence of diurnal variations. Twenty-four-hour IOP recordings were obtained from 28 patients (28 eyes) with active uveitis (measles, n=8; cytomegalovirus, n=7; toxoplasmosis, n=4; herpes simplex, n=3; syphilis, n=3; sarcoidosis, n=2; and idiopathic, n=3) and in seven healthy controls (normal population). Statistical analysis showed that the occurrence of diurnal variations in the IOP was not significantly different in the eyes with uveitis as compared with controls (χ^2 , 2.9; $p=0.15$). The mean baseline IOP during the night in the uveitic eyes was significantly lower (16.1 ± 1.7) than in the controls (20.8 ± 3.1 , $p=0.009$). Moreover, the occurrence of diurnal variations was not influenced by the duration of the disease, the age of the patient, the number of cells in the aqueous humor, the intraocular inflammation, the location of the intraocular inflammation or the steroid treatment. The IOP fluctuation during the night in patients with uveitis is similar to the findings in healthy controls. Therefore, other factors than the extent of inflammation seem to influence the occurrence of diurnal variations in the IOP in patients with uveitis.
