I. Rgc Audio Z3ta Plus DXi VSTi V1.41..The present invention relates to an image data processing apparatus for separating a selected area of a color image to be represented by a gray scale from the remaining area thereof. An image data processing apparatus disclosed in Japanese Patent Application Laid-Open Publication No. 62-254774 is a known example of such an image data processing apparatus. The disclosed image data processing apparatus separates a particular area of a color image in a negative plate from the remaining area thereof. As shown in FIG. 8, the disclosed image data processing apparatus comprises: a white reference plate 1; a yellow filter 2; a green filter 3; a blue filter 4; and a black filter 5. The white reference plate 1 is formed of a white base plate (which may be glass or an opaque board) having yellow, green and blue filters (yellow filter 2, green filter 3, blue filter 4) pasted on its top surface so as to correspond to white, yellow, green and blue, respectively. The white reference plate 1 is illuminated with light from a light source 6 to illuminate the lower surface with an image of the white reference plate 1. The output from the light source 6 is separated by a beam splitter 7 into two components, one to illuminate the white reference plate 1 and the other to a reference detector 8. The reference detector 8 is, e.g., a photomultiplier to which a black reference plate (not shown) is attached. The reference detector 8 detects the light reflected from the white reference plate 1, and outputs a detection signal corresponding to the amount of light detected. f30f4ceada
