Macro Recorder lets you record a series of keyboard strokes. These then can be played or replayed. Multiple Record Modes Macro Recorder lets you record your keyboard strokes, including hotkeys, in several different modes. Simple: After choosing the name of the macro, click the small Record button to start recording. Each subsequent keystroke will be automatically played back. Watch: You can choose from three different types of playback: Single Press, Continuous Press and Repeated Press. Repeat: You can also choose to repeat the last recorded macro for a given number of times. Search: Use the keyboard and mouse to search for a specific text string or user-defined regular expression, and then replay a macro to insert it automatically. You can preview the search results in a Scroll window. Evaluate: When a search or record operation is done, the macro is evaluated. All output is highlighted in the edit window. Clicking an output item will select that item, and you can play it back with any of the playback options. If you do not want a macro to select anything, do not highlight it. Import/Export: You can import and export macros to/from a file for easy editing and reuse. Note: If you experience any problems with the program, please visit the support page at Keyboard macro recorder, which allows you to record several keyboard strokes. You can play, edit and replay all macros. Easy to use, easy to record and save, you can use macros to control your computer - and for example make multiple clicks at once. MouseTool is a web-based application which allows you to investigate website statistics as well as view them a bit different. Similar to other tools that let you do this, MouseTool presents tables and charts, with some filters and different options. What you'll like about MouseTool Like other programs on this list, MouseTool is based on Java, and thus requires a Java Runtime Environment in order to function. What differentiates it from others is that it's completely web-based, and thus can be used by anyone. You can explore your website statistics from a couple of different perspectives, as well as view them on several different levels. A great deal of options can be used in order to view and save files, and tables and charts can be generated for better analysis and simple presentation. In order to access all the options, you'll need to sign up for an account. Once you do, you can log in to use the application. A neat feature is the ability to share data and resources with friends and colleagues. Pros There's a free version that can be used to see stats as well as save data to a database for later analysis. The paid version features more options. The application can be used by anyone. It has several settings that can be used to customize information. Cons The paid version is not free. Verdict Overall, MouseTool is a neat tool to use in order to view website statistics, as well as save information to a database for later analysis. The paid version is not free, but can come in handy, and can be used by anyone. This is an old version of PC Tools, but we've still given it a mention. Check out our review for the latest version here. Overview PC Tools is a freeware desktop application that allows you to monitor and control your computer from a few different perspectives. The application allows you to monitor disk space usage, log information, and run scheduled scans and maintenance tasks. It's a nice alternative to Windows built-in options.
