Reeves:Fix your home broadband connection with this quick guide as part of our ongoing quest to help you stick it to the man with a handy how to guide to sort out your home broadband.Moscow State University of Civil Aviation The Moscow State University of Civil Aviation () is a university located in Central Moscow, Russia. It was established in 1988 as a branch of Moscow State University of Railway Technologies (MSUR) (). History The university was established in May 1988 as the branch of MSUR. The first head of the university was Arnold Filippov. The first rector was deputy prime minister of the USSR Semyon Bogomolov-Schas. The university has the status of a leading scientific and educational institution, i.e., a state "superior" educational institution, of higher education. The Rectorate of the university is headed by Anatoly Razumovskiy. In 2012, the university won the Russian Big Belt Award for implementation of a new educational program for civil aviation managers. For its high level of education, the university was included in 2012 in the Global University Explorer, a list of the best undergraduate universities in the world. Faculties and departments The Moscow State University of Civil Aviation consists of ten faculties and one department. Faculties Faculty of Cosmonautics and Technical Cybernetics Faculty of Aviation Technology Faculty of Air Transport Faculty of Air Navigation Faculty of Aeromodeling Faculty of Civil Aviation Administration Faculty of Management Faculty of Mathematics and Computer Science Faculty of International Civil Aviation Department of Transport and Navigation References External links Official website of the university Official website of the Moscow State University of Civil Aviation Civil Aviation Category:Aviation schools in Russia Category:Universities in MoscowThis project is concerned with the development of general methods of transcribing electron microscopic (EM) images into a computer-interpretable format. Digital image processing techniques have made it possible to perform many of the operations necessary for the analysis of electron microscope images, but these new methods have few inbuilt constraints about which operations are desirable and which are not. The information contained in an image is not only its geometric aspects, but also about the intensity of the image and the orientation, as well as the size and number, of the component features. The image can contain a substantial amount of information that cannot be efficiently
