### Autodata 3.17 Po Polsku

In the download.txt file: (Sorry for the bad formatting, I just copied it from Google Docs) I don't really know how to fix this problem. My code is very simple. When I run the code, I immediately get the following error: An unhandled exception of type 'System.InvalidOperationException' occurred in Microsoft.VisualBasic.dll Additional information: 'AutoData\_pl.AutoData' is either misnamed or not the correct type. I have searched and searched, and I have not found anything helpful. I am using Visual Studio 2012 Express. A: The problem is you declared your variable as AutoData but then try to assign a string to it. That is why you get the error. You should either rename AutoData to AutoData\_pl or change the type of your AutoData variable. Since you are going to make a lot of these for the world, it would make more sense to have separate variables for all the different languages. You would also make it a lot easier if you know all the names match up. You have a lot of variables to manage and it is more efficient to use a named range rather than make it loop. Sub AutoData() Dim wb As Workbook Dim ws As Worksheet Dim IRow As Long Dim num As Long Dim strUserInput As String Set wb = ActiveWorkbook Set ws = wb.Sheets("Sheet1") With ws IRow = Cells.Rows.Count, "G").End(xlUp).Row num = 1 For i = 1 To IRow strUserInput = Cells(i, "G").Value Select Case Mid(strUserInput, 1, 3) Case "BRF" .Cells(i, "H").Value = strUserInput .Cells(i, "I").Value = Cells(i, "H").Value Case "PEN" 6d1f23a050
