**Arturia - CS-80 V3 3.3.1.1785 (STANDALONE, VSTi, VSTi3, AAX) X64 Crack**

5 answers - Fix it was a cracked download from warez or some such.. PATCHED Arturia - CS-80 V3 3.3.1.1785 (STANDALONE, VSTi, VSTi3, AAX) x64: free Download - Arturia Arturia M1 MkIII Windows 7.Q: Python If statement if two values in one field are the same I have a problem where I am trying to make a date field a choice between two dates and I want to output a date if either a two dates are the same or the day is Monday. import datetime def rateUpdate(regdate, rate): import datetime if regdate!= datetime.datetime.today().weekday(): regdate += datetime.timedelta(days=rate) print(regdate) return regdate When I execute this in the Python Shell I get an error of: Traceback (most recent call last): File "C:\Users\Gordon\Desktop\Python\abs\rate.py", line 10, in if regdate!= datetime.datetime.today().weekday(): AttributeError: 'str' object has no attribute 'weekday' Thanks in advance for any help. A: Try: import datetime def rateUpdate(regdate, rate): today = datetime.datetime.today() if regdate == today.weekday(): regdate += datetime.timedelta(days=rate) else: regdate += datetime.timedelta(days=rate) print(regdate) return regdate EDIT: if you want to return one of the two values, you could use a ternary operator (?) if regdate == today.weekday(): regdate += datetime.timedelta(days=rate) else: regdate += datetime.timedelta(days=rate) print(regdate) return regdate we c6a93da74d
