The fact remains that in terms of making a quality image of your enjoyable hobby, Adobe Lightroom is still unmatched. If the software was faster, if it didn't crash all too often, if it worked with more files, then I could vouch for it. But that's just the extent of what I can find positive to say about this piece of software. In my experience, Lightroom may not be the best RAW conversion software, but it has qualities that make it arguably the most popular image on-demand editing tool. At the end of the day, until you upgrade to a newer version of Lightroom, reducing your exposure to file farming by using Lightroom's built-in design tools and exporting your editing, will help ensure you always have an up-to-date version of your photos ready for the holidays. Photo restoration, though sometimes requiring some serious hardware, is achievable by even the most novice files without having to open them in Photoshop. Regardless, I'd recommend you not sacrifice the benefit of some of the new Lightroom's new features in any way. You might want to go take a look at the Adobe Lightroom website where you can read more about this product and look at some demos. I am absolutely undecided whether to upgrade to Lightroom 5 yet. I'm a Core i7-2600 processor user and my computer crashed probably four times in the past few hours. In order to perform the upgrade, I had to shut down, restart, and check to make sure that there is nothing to be afraid of. Still, I would wonder whether the hard drive will not fail at some point. On the other hand, I might have to restart altogether because Lightroom 5 seems to require a lot more RAM than the previous versions. In any case, suffice it to say that Lightroom 5 is a nice upgrade. I would recommend serious users to upgrade, and not just those who are just starting out.
